## EmAGN Forum: BIM

BIM is an intelligent 3D based modelling process of data generation for architectural, engineering and construction professionals.

One of the many benefits of BIM is for efficient workflow management processes for the progression into construction management, in particular, collaborating with others. Training and making sure the standards of BIM are reflected in practice is difficult. It is up to the individual and project leaders in how software is used not just what they can do.

Topics include: BIM in practice, management plans, project set up, computation techniques and more, for the successful coordination with consultants and delivery of the services we are contracted for.

How does BIM flow?

Speakers:

Holger De Groot - HDR

Guillermo Aranda-Mena - RMIT University

Steve Appleby - AECOM

11th October 5:45pm

HDR

Space & Co, Room 9.01

Level 9, 360 Elizabeth Street

\$5 for AIA members, \$20 non members

Bookings essential:
